

## Package

- Package in java used to group related classes.
- It provides a namespace for a class
- The package name used to uniquely identify the class.
- Naming convention - LowerCase

```
package com.bean;  
  
public class BM {  
}
```

- Class's unique name - com.bean.BM
1. Build-in package (package from Java API)
  2. User-defined package (Create own package)
