Keywords

Java Main method syntax

> public static void main(String[] args)

- public - Access specifier
- static – Non access specifier (Direct access)
- void – Return type
- main – Method name
- (String[] args)
  - For storing command line arguments.
  - Without this, no error. But the code doesn't execute

Super

- It's a reference variable, that is used to refer immediate parent class object.

This

- It's a reference variable, that is used to refer current class object.

Global Variable – Instance variable

- Declared anywhere inside the class & outside the method
- Visible to all methods in the class

Local Variable

- Declared inside the method/block
- Cannot access from outside of the method/block
